

# permanent makeup aftercare

For 7 days following the application of permanent cosmetics:

Do not touch the healing pigmented area with your fingers, they may have bacteria on them and create an infection.

Wash your brows for the first 7 days and apply ointment after.

Day 1, wash and apply ointment every hour.

Day 2, repeat but every 2 hours & day 3-7 repeat but just morning & night.

Always use a clean cotton swab and not your fingertips.

No make-up, tinting on lashes or brows, sun, soap, sauna, Jacuzzi, swimming in chlorine pools or in the recreational bodies of water, contact with animals, or gardening for 7-10 days (until area is completely healed) post procedure and after all touch-ups.

Before bathing, gently apply a light coating of Aquaphor to the procedure area using a clean cotton swab. Continue this regime until the procedure area has completely healed.

Do not rub or traumatize the procedure area while it is healing (pigment may be removed along with crusting tissue).

Use a "total sun block" after the procedure area has healed to prevent future fading of pigment color.

Do not use products that contain AHA's on the procedure area. (Example: Glycolic, Lactic Acids. Always check your product labeling) it will fade your pigment color.

Try to sleep on a satin pillowcase while the procedure area is healing.

If you have any questions or concerns, please notify your technician immediately.

If you experience any itching, swelling, blistering or any other complications post-procedure, stop using the product and call your technician immediately. You may be allergic to the after care product you are using!

If you have excessive redness, swelling, tenderness, or any red streaks going from the procedure site toward the heart, an elevated temperature, or purulent drainage from the procedure site, contact your physician as the area may be infected and you may need to seek medical care.
